making PACS
more efficient

DICOMetrix
PACS Performance Monitoring Software

The World's only Proactive DICOM image flow and network performance monitoring solution.

DICOMetrix is a resource tool that enables PACS Administrators, Directors and IT personnel to actively monitor, historically track system performance, and alert radiology and PACS support staff about system slow-downs and outages.

- Easy to Interpret read-out based in Images-Per-Second something that is easy for all users to relate to.
- "At a glance" diagnosis of your network flow.
- User defined gauges for time intervals.
- Full screen mode and mini-mode viewing options.
- Low CPU usage and near zero temporal delays so there is no lag on delivery of images.
- Workstation, Modality and 25 Channel DICOM Server versions available.
- Web Enterprise Server for monitoring, alerting and tracking your entire network.

This early warning system proactively tracks DICOM image flow and Network problems, before they become patient care problems.
